

Finding interrelationships in data

At its best data journalism involves analyzing different datasets to reveal something new.

Whenever you receive or locate data on a certain issue always ask if you can relate it from other data to reveal more insights.

Physician emigration dataset

Exercise

- Find the total number of doctors emigrating from the represented African countries.
- How many doctors have emigrated from Kenya?
- Which country the highest number of doctors who have emigrated? Which country has the least?
- What is Kenya's rank?

- What other datasets would you consider if you were to write a story about cost of doctors emigration to Kenya?
- Mine at least three of those datasets.

Life expectancy

Dataset: Life expectancy versus GDP

Give the life expectancy and GDP rank for each country?

Is there any link between life expectancy and GDP?
